

I4C BLOCKCHAIN FORENSIC INTELLIGENCE DOSSIER

Generated by: Team Garuda Attribution Core Engine | Target: 0xTargetNode

1. Executive Summary & Core Vectors

Automated graph parsing engine successfully traced the transactional perimeter of the suspect target address **0xTargetNode**. Deep ledger analytics mapped cross-hop layering methodologies designed to circumvent standard AML detection boundaries.

2. Discovered Attribution Endpoints Matrix

Endpoint Node Address	Attributed Entity	Hop Depth	Calculated Risk Score
0xWazirXInboundClusterA2	WazirX India Exchange	3	15/100
0xTornadoCashMixerRouter	Tornado Cash Mixer Protocol	2	100/100

3. AI/ML Assisted Fraud Typology Pattern Matching

Pattern Identified: Automated Peeling Chain (Fund Splitting) at Node *0xSplitter1*.
Confidence Array: HIGH (92%)
Technical Profile: Splitting uniform blocks of ~2500.00 USDT across 2 destination paths.
